

Jay Ambe PG API Integration Guide

Jay Ambe PG API Integration Guide

1. Where React Reads Data Today

Temporary browser storage helpers are here:

```
""text
src/pgadmin/Utils/pgRequirementStore.js
src/pgadmin/Utils/allocationHelper.js
src/pgadmin/Utils/paymentHelper.js
src/pgadmin/Utils/adminAuth.js
""
```

When Node.js API is ready, replace localStorage reads/writes in these files with API calls.

2. API Base URL

Set this in '.env':

```
""text
REACT_APP_API_BASE_URL=https://your-domain.com/api
""
```

Create an Axios client in:

```
""text
src/pgadmin/Utils/apiClient.js
""
```

Recommended client:

```
""js
import axios from "axios";

const apiClient = axios.create({
  baseURL: process.env.REACT_APP_API_BASE_URL,
  withCredentials: true,
});

export default apiClient;
""
```

3. Required API Routes

Authentication:

- 'POST /auth/login'
- 'POST /auth/logout'
- 'GET /auth/me'

Dashboard:

- 'GET /dashboard/overview'
- 'GET /action-center'
