

Jay Ambe PG Live Server + MySQL Setup Guide

Jay Ambe PG Live Server + MySQL Setup Guide

1. Project Stack

- Frontend: React
- Backend: Node.js + Express
- Database: MySQL 8+
- UI: Bootstrap template styles + Tailwind CSS utilities

2. Build React For Live Server

From the 'payingguest' folder:

```
““bash
npm install
npm run build
““
```

Upload the 'build' folder to your hosting server or serve it from Node.js.

3. Create MySQL Database

Schema file:

```
““text
database/mysql/jay_ambe_pg_schema.sql
““
```

Import command:

```
““bash
mysql -u root -p < database/mysql/jay_ambe_pg_schema.sql
““
```

Database created:

```
““text
jay_ambe_pg
““
```

4. Environment Variables

Copy '.env.example' to '.env' on the live server.

Important values:

```
““text
REACT_APP_API_BASE_URL=https://your-domain.com/api
MYSQL_HOST=127.0.0.1
MYSQL_PORT=3306
MYSQL_DATABASE=jay_ambe_pg
MYSQL_USER=your_mysql_user
MYSQL_PASSWORD=your_mysql_password
““
```
